Billy Gordon

Endpoint Automation Engineer
South Carolina (Remote)
Portfolio: https://william112792.github.io/

Headline Impact

Delivered enterprise-scale endpoint automation across 1,500 devices and 70 sites, reducing non-compliance to <0.1% and onboarding effort by ~90%.

Summary

Endpoint Automation Engineer with 12+ years of experience building scalable Windows endpoint environments. Specializing in Microsoft Intune, Autopilot, and PowerShell automation. Focused on eliminating manual processes through zero-touch provisioning, remediation frameworks, and workflow-driven system integration. Experienced in leveraging AI tools for log analysis, trend detection, and operational insights.

Core Skills

- Microsoft Intune / Endpoint Management
- Windows Autopilot (Zero-Touch Provisioning)
- PowerShell Automation & Remediation
- Workflow Automation (Power Automate)
- AI-Assisted IT Operations

Systems / Architecture

- Layered infrastructure design (Virtualization, Storage, Containers)
- Proxmox virtualization with hardware passthrough and VM lifecycle control
- TrueNAS storage management with RAID configuration and disk mapping
- Container orchestration using Dockge and Docker-based deployments
- Reverse proxy and routing using Nginx with DuckDNS domains
- Secure remote access via Tailscale private networking
- Service segmentation across applications (Plex, WikiJS, Calibre-Web)

Experience

Endpoint Automation Engineer – Avita Pharmacy
Dec 2014 – Present

- Reduced endpoint non-compliance to **<0.1% across 1,500 endpoints and 70 sites** by designing automated remediation frameworks and establishing cross-team knowledge base standards.
- Reduced onboarding and offboarding effort by **~90% across 70 sites** by developing PowerShell-driven UI/UX automation tools and integrating attribute-based provisioning workflows.
- Reduced ticket volume by **~20% across a 1,500-user environment** by identifying recurring issues and converting them into scalable, automated remediation workflows.
- Reduced phishing vulnerability rates to **~1% across 1,500 users** by implementing dynamic group-based policy enforcement and automated security assignments.
- Reduced outdated third-party antivirus versions to **~10% across 1,500 endpoints** by deploying targeted remediation scripts and enforcing standardized power and update configurations.

Project Portfolio

- Endpoint Automation Platform – Intune, Autopilot, and automation workflows
- Intune Remediation Scripts – Detection + remediation framework
- Layered Infrastructure Lab – Virtualization, storage, and container architecture
- Autopilot Deployment Lab – Zero-touch provisioning with group tags
- AI Log Analysis Toolkit – AI-driven reporting and remediation workflows

---

Automation Philosophy

- Detection-driven execution
- Modular and reusable design
- Scalable naming conventions
- AI-assisted analysis and decision support

Education

Midlands Technical College
Associate Degree – Network Systems Management
